

3-Day React Crash Plan (For Django Developers)

Day 1 – React Fundamentals (3 hrs)

Goal: Understand React syntax, components, and state

- Hour 1: Install Node.js, Setup React project (Vite or CRA), Learn JSX (variables, attributes, className)
- Hour 2: Create functional components, Pass props, Component reusability
- Hour 3: Learn useState() hook, Handle button clicks, Practice: Counter App (Increment/Decrement/Reset)

Day 2 – Rendering & Side Effects (3 hrs)

Goal: Learn list rendering, conditional UI, and API calls

- Hour 1: Conditional rendering (if, ternary), Loop with .map() to render lists
- Hour 2: Learn useEffect(), Fetch data from free public API, Display list of posts
- Hour 3: Create form with input fields, Capture input with useState(), Submit data (console.log)

Day 3 – Routing & Connecting to Django (3 hrs)

Goal: Learn routing and connect with Django backend

- Hour 1: Install react-router-dom, Setup basic routes (Home, Login, Dashboard)
- Hour 2: Learn POST request with fetch(), Connect to Django API (login/register endpoints)
- Hour 3: Display data from Django API (tasks list), Handle loading and errors, Small project: Task List App

■ Outcome After 3 Days

- You will know React components, state, props
- You can fetch data from Django REST API
- You can display data & handle forms
- You can navigate between pages and build small projects
